4) 10 counters in a bag. 4 red, 3 green, 2 pink and 1 blue.

Ella picks a counter at random from the bag, notes the colour and then puts it back in the bag.
a) Ella uses this method to work out the probability of selecting 2 greens in a row.

She writes: "There are four colours, so the probability of selecting a green is $\frac{1}{4}+\frac{1}{4}=\frac{2}{4}$, so the probability is $\frac{1}{2}$."
a) Make two criticisms of Ella's method. (2 marks)
